Abstract - Social Assistance FDIKOM is a work program of DEMA FDIKOM which is an annual program. The 2022 FDIKOM Social Assistance Program will be held in Pemulung Village, Bintaro. The FDIKOM Social Assistance Program in 2022 is quite unique, because all of the actors or the implementing committee of the FDIKOM Social Assistance Program are new students (semester 1 students). FDIKOM Social Assistance has an interesting theme, namely, "SOLIDATE TOGETHER, BUILD BROTHERS, CREATE HAPPY". The theme which contains the meaning of brotherhood among others is very related to the 2022 FDIKOM Social Assistance. FDIKOM Social Assistance is implemented to implement the Tri Dharma points of Higher Education, namely, Research, Education, and Community Service. Social assistance FDIKOM 2022 focuses on the third Tri Dharma point, namely Community Service. The purpose of implementing the 2022 FDIKOM Social Assistance Program is to increase our sense of concern among fellow human beings and also to help our brothers and sisters in Pemulung Village, either by providing basic food items, health checks and educational materials to local residents.

Keywords : Social Assistance , Students, Community

1. INTRODUCTION

Poverty is a familiar thing in Indonesia, but also the solution to overcome poverty is still not sharp in Indonesia. We found a group of students from the Faculty of Da'wah and Communication Studies who carried out a work program for their faculty. The work program was Social Assistance, where Social Assistance was closely related to poverty. The location of the Social Assistance is in the middle of the elite area of Bintaro, South Tangerang City, precisely in Pemulung Village, Jurangmangu. I tried to talk with one of the actors from the work program. I am thinking about the purpose and reasons for the implementation of the Social Assistance work program. The purpose of doing the Social Building apart from the work program of the faculty turned out to have another purpose, namely to alleviate the needs of the community there. The needs needed by the people of Kampung Pemulung are quite a lot, ranging from education, worship facilities and food. However, the faculty students only focus on building basic materials (sembako), health checks, and entertainment for the children there

2. METHOD

Collecting data and analyzing the field (survey), interviewing scavenger villagers. We also conducted interviews with the committee and people involved in Social Assistance FDIKOM.

Our goal with this method is:

1. So that we get actual and strong data.
2. Obtain data according to analysis and based on the actual situation.

In addition, the methods we use are:

1. Location survey and data collection with situation analysis at the FDIKOM Bansos Location.
2. Conducting interviews with residents participating in the FDIKOM Social Assistance.
3. Intense interviews with community leaders in the environment regarding the situation felt by the community after the FDIKOM Social Assistance was held.

3. MAIN HEADING OF THE ANALYSIS OR RESULTS

Social assistance for small communities in the South Tangerang area who really need the care of others for their lives. As a result, we know the importance of education and health as well as

staples for the people there, we can find out how important education is after education from the presenters, and the importance of health after a health check from LKMI, then the importance of basic material assistance where FDIKOM collaborates with BAZNAS.

4. CONCLUSION

The conclusion from our research related to Social Assistance FDIKOM is, we as researchers can find out about social care, and the real function of human beings among fellow humans. Then we also understand the importance of education, where education in the village is a foreign thing for the children there to get a proper education. Then there was a health check. We as researchers have come to know that health is an important thing in life. After FDIKOM Bansos collaborated for health checks with LKMI. We also came to know the importance of staples for life, after BANSOS, FDIKOM collaborated to distribute staples with BAZNAS. Not only that, we were also happy when we received reports from local residents that the FDIKOM Bansos really entertained the little children in Pemulung Village by playing with their brothers and sisters from the FDIKOM Bansos.

ACKNOWLEDGMENTS

We express our gratitude to all those who have been involved in the making of our journal, to the residents of Kampung Pemulung who have allowed us to do research there. In particular, our

lecturer, Ms. Wahyunengsih thank you for giving us the opportunity to be able to contribute to journaling as a subject.
